At Ryan, we are known for our ability to find tax saving opportunities for our clients and to aggressively fight for those dollars. Our methodology is backed by leading tax technology solutions that ensure we perform our services in the most efficient and effective manner possible. Ryan's proprietary Ryan eCapture® technology application pulls electronic documents by automating the extraction process from the client’s Enterprise Resource Planning (ERP) system. The process eliminates the need for manual retrieval, expedites the extraction process, and minimizes the disruptions to our client’s operation. Ryan eCapture® sends programmatic commands to retrieve, save, and track the invoices through standard mouse and keyboard commands, ensuring that all invoices are accurately tracked and managed, and every opportunity for tax savings is identified.

By automating the extraction process, Ryan eCapture® improves the efficiency of pulling invoices from any ERP system.

**Benefits of Ryan eCapture®**

- **Simplified Electronic Document Extraction**
  Emulates the actions of a person pulling targeted electronic documentation via the front-end interface of the imaging system but does so in a much more efficient manner, ensuring that every invoice is collected and cataloged.

- **Minimal Disruptions**
  Engineered to operate autonomously with built-in ability to seamlessly pull, save, and report on all retrieved invoices in a manner that minimizes disruptions to the client and reduces the time required for engagement teams to be onsite at client facilities.

- **Simple Requirements – No Installation**
  Does not require software installation; rather, clients need to provide only a computer workstation equipped with Microsoft Windows® operating system, Microsoft Excel®, access to the imaging system, and either Internet access or the use of a USB port to transfer Ryan eCapture® and the extracted image files.
